

Milescu 100 MT

Milu Milescu (1911 – 1981) was a highly respected chess author and editor. For several decades he had written interesting and instructive columns in which he demonstrated the close relation between games and compositions. A chess theme, like a fortress, breakthrough, pin or loss of a move – argued Milu – could arise in either a composed study, a problem, or a practical battle. By learning a theme from the artistic form of chess, one could implement it in his games, or vice versa.

Publishing his pieces in the Romanian "*Revista Română de Şah*", The German "*Deutsche Schachzeitung*", the French "*Europe Echecs*" and in his last twenty years, also in the Israeli monthly "*Shahmat*", Milescu had become a great popularizer of chess art to generations of chess enthusiasts. His book, "*Das 1x1 des Endspiels*" (written jointly with Hans-Hilmar Staudte; published by De Gruyter, 1965) is occasionally cited by leading authors even today.

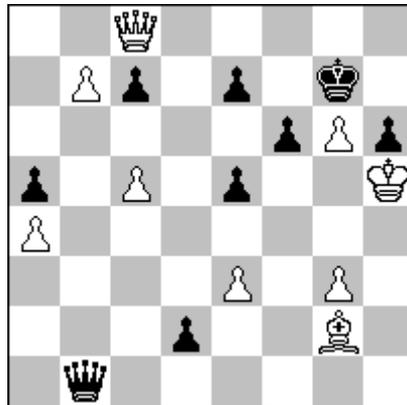

In the passing years, there have been several attempts in Israel to renew the trend of his columns, for instance by the present author, by Yochanan Afek, Alon Greenfeld and Yaacov Peleg. This attests to the loss we all felt when he departed.

The studies ty in Milescu's honor has drawn 33 submissions. In Milu's spirit, I gave preference to artistic works, and game-like positions. Nine studies were chosen as candidates for my award and fortunately they all survived the scrutiny of soundness and anticipation checks by **Harold van der Heijden**. His help and the dedicated assistance of tournament director **René Olthof** were applaudable, as was **Yochanan Afek's** initiative to hold this competition.

The results will be finalized within 3 months following publication.

Excellent sacrificial tussle, with high tension and surprising blows in abundance. White must constantly defend against mighty threats. 7.Qg5!! is a great move; a black queen (albeit not the same queen) visits all four corners during the solution, yet this proves insufficient to escape from white's stalemate nets.

A clever play by black, forces the white king to the diagonal c1-h6, so that a promotion with check (9.h8=Q+) will be met by a counter-check (9...Bh6+). At this very juncture, when we are led to believe that black is saved, comes the astounding rejoinder 10.Qg5+!!, settling the issue in white's favor.

Composed in the same explosive style of the previous studies, but the final elements are known. The introductory play, though, including a quiet knight promotion and interference changes (7...Kd4 – 9.Nc6+!; 7...K:e4 – 9.Qc6+!) is impressive.

Two stalemate avoidances and one pretty mutual Zugzwang, in which a black queen surrounds to a knight. All this in a pleasant, game-like setting. 6.Kb3!, walking voluntarily into check, is a clever use of the configuration found by Nevanlinna (c1/a5, 1970).

A correction of a deficient prior work. Remarkably, the white bishop is more a hindrance than an advantage; getting rid of it enables victory.

White's forces are not well-coordinated, and the secret of winning lies in a lovely sacrifice of a knight to achieve domination of the queen on a half-empty board. Short and sweet, surely a solvers' delight.
