THEMATOLOGY a book review

THE ULTRA MODERN ENDGAME STUDY, by Jan van Reek, 1989. ISBN 90-72939-01-8. 64 pages, 105 diagrams. In English.

One of the leading Dutch composers and columnists offers a considered answer to the related questions: how can today's best studies be characterised, and what lies ahead? Since the fewer the exclamation marks in a chess book the more serious its intent, this work is to be taken very seriously indeed. It is neither a popular work nor an anthology.

Rather it meets a long-sensed specialist need, at least in the English language - for which we thank our enthusiastic, generous and energetic Dutch friends who comprise the ARVS. The specialist minority addressed is that of active composers and others prepared to think about the state of the endgame study.

In the third of the book's four chapters the author explores in depth the richness to be found among the echoes and syntheses of *the modern study*, a richness that arises from identical or different themes woven into tries and (serial or parallel) main lines. But in search of innovation van Reek remains dissatisfied and fearlessly proclaims that future development lies in the even more complex concatenation of ideas. He puts it in these words: "*The ultra modern endgame study* consists of linked endgame studies. In each main line of an ultra modern endgame

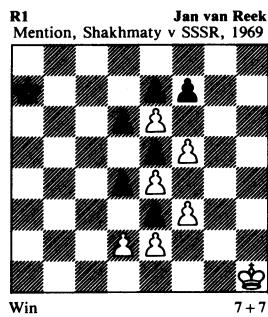

study, more than one phase can be distinguished. Each phase has a different material setting and usually a different theme..." And in the fourth chapter we encounter examples, including (because there are always forerunners) some from the past and the present.

If the author is right we can but pray for the breed of super-composers, not to mention solvers, to spring up and multiply that can operate at such rarefied altitudes. Can today's peak really be tomorrow's trough? In making a point this way we exaggerate - van Reek clearly states that the ultra modern endgame study is closely related to the modern endgame study, which has been with us for many a year and is far from dead.

Considered as a *discussion paper* the book leaves scope for debate. For instance, the inimitable studies of Pal Benko, with their extraordinarily deep but still precise manoeuvres, do not immediately fit into van Reek's scheme. Nor should restraints be placed on stylistic freedom. And no one expects beginners to start at the top. But beyond question *The Ultra Modern Endgame Study* is a valuable contribution. It is a firm stepping stone, a landmark even, strategically placed and timely, bringing us within sight of the opposite shore.

But what river are we crossing? No less stimulating than the book's main thesis is its treatment of terminology. The word 'theme' occurs where others might prefer 'thought'. The distinction this reviewer makes is that a chess

thought becomes a theme when it is expressed in as precise terms as its constituents allow. In the interests of emphasis on creativity van Reek abandons such attempts to tie down meaning. Instead he gives it freer rein, in my view to the detriment of discussion. What I should dearly like to see is the promulgation, after necessary hard work, of an accepted comprehensive and structured terminology corresponding to the hierarchy that extends from art at one extreme through to chess elements (based on *BMR* as set out in the final chapter of *TTC*) at the other. The subject is relevant here because van Reek talks in terms of themes, thoughts, ideas, phases, main lines, tries and 'endgame elements'. Some terms are defined, others not. He also introduces the term 'general idea', defined by reference to such aspects as 'miniatures' and 'romantic studies'. His purpose is to draw attention, by giving a name, to the areas of innovation of the ultra modern study, to distinguish them from innovation at the *thematic* level, which is the hallmark of the modern endgame study. But to place two such ill-assorted aspects under the same heading obfuscates when the aim should be enlightenment.

Solution to R1: 1.de fe 2.ed ef 3.de fe/i 4.ed ef/ii 5.de fe 6.e8Q wins.

i) de 4.ef Kb6 5.Kg2 Kc6 6.e4 Kd4 7.Kh3 Ke3 8.Kg3 Kd3 9.Kh4 Ke3 10.Kg4.

ii) ed 5.fe Kb6 5.Kg2 Kc6 (Kc5;Kf3, Kc4;e5) 7.Kf3 Kd7 8.Ke3 Ke7 9.Kd4 Ke6 10.e3.

R1 is the author's first example and well illustrates the vocabulary difficulty. He draws attention to three 'end-game elements' (a term denoting Korolkov's straightforward classification of themes) in the solution, namely: systematic manoeuvre by a pawn; repetition of idea by W and Bl; and P-promotion (to Q). Now it seems to me that this is already to some extent arbitrary (and therefore unsatisfactory) because other aspects are arguably prominent in **R1**: pawn symmetry; clearance of the e-file (6.e8Q wins only because wQe8 covers e1); supporting variations requiring accurate play in practical P endings; a strong element of humour. When the composer tells us that the theme, the artistic intention, was *repetition of an idea by W and Bl*, this is even more subjective and arbitrary. In the first place, a composer may no longer be accessible for purposes of knowing his intention; in the second place the composer may change his mind, or at least his preferred emphasis; and in the third place if the endgame study is a serious activity that bridges art (with its criteria of beauty and originality) and science (with its criteria of soundness and express or implied principles), discussion ought at some point to leave subjectivity and arbitrariness behind. What is still lacking, surely, is a logical test (or tests) to determine whether an alleged theme really is a theme, a test (or tests) to determine whether an alleged motif (this is one of many words that van Reek does not employ) really is a motif or not, and so on.

But van Reek's book is not primarily about terminology. Whether or not we accept the thesis of the ultra modern endgame study (which may be summarised as 'if there are no new themes, we must combine old ones in new ways') we cannot deny that the author has

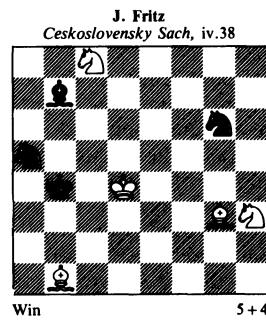

built, and vividly illustrated, a firm structure for inter-study comparisons based on main lines, tries and phases. To repeat, this is stimulating stuff. It will harm no reader to be stimulated.

(The Ultra Modern Endgame Stud, which was produced with remarkable celerity, is the first of an annual series planned by the Alexander Rueb Vereeniging voor Schaakeindspelstudie (ARVS), the name which has replaced the NVVS (see EG95). I am proud to have been associated, albeit fleetingly, with a phase in its preparation. It may be purchased only through Jan van Reek (address on back of EG94). Individual copies are priced at DuFl. 22.50 (hand bound; DuFl. 50,-), with reductions for multiple orders.)

SNIPPETS

1. From a 5-page article in *Shakhmaty v SSSR* (ii.89) we learn of the notable and varied musical talent of the following Russo-soviet study composers.
 - 1.1. *Yury Nikolaevich TYULIN* (1893-1978), musical authority, also a correspondence player.
 - 1.2. *Aleksey Mefodeyevich BELENKY* (1905-85), concert pianist and accompanist.
 - 1.3. *Vitaly Alexandrovich CHEKHOV* (1908-65), orchestra leader and accompanist for gymnastics.
 - 1.4. *Alexander Pavlovich DOLUKHANOV* or (post-war) *DOLUKHANYAN* (1910-68), pianist and composer, including for films. Died in a traffic accident, as did Shatzkes.
 - 1.5. *Boris Abramovich SHATZKES* (1931-85), son of a well known pianist and himself highly accomplished. Turned to study composing when there was insufficient time for tournament play.

2. On p.1 of EG51, in an item about Jindrich Fritz, the late Soukup-Bardon refers to the 'Romanian theme'. This theme is the following. *In an apparently lost/drawn position B1 finds a quiet manoeuvre to reach a quasi-draw/win, but W finally finds a winning/drawing path.* In 1950 a match was organised with Czechoslovakia, Hungary, Poland and Romania as national participants. The above (studies) theme was proposed by Romania and became familiarly known in Czechoslovakia as the 'Romanian theme'. Nos. 55, 54 in Fritz' 1959 collection were his successful entries. The 1938 study by Fritz, '20 years ahead of its time' in the opinion of Soukup-Bardon, was a favourite of the composer, who wrote that "the piece exchanges take place as a result of active play and not in the usual humdrum manner". (Our thanks to J. Pospisil of Prague.) Readers may like to consider the 'Romanian theme' in the context of EG97's leading article.

REVIEWS

Chess Tactics for Advanced Players, by Yuri Averbakh. In English, but published in East Berlin by Sportverlag, 1986. Over 600 diagram in 328 handsome pages.

Although this tidy volume is intended to teach the middle game, no EG reader will disapprove of the hundreds of illustrations taken from studies or from the ends of studies. Examples of 'double attack' (interpreted in the broadest sense) lead to a definition of a 'combination' and a classification of combinations. The 'harmonious cooperation of pieces' attracts much attention and leads to the new term 'elementary contact' in an attempt to disclose the meaning and essence of such phrases. The author's reasonable contention is that the understanding of the theory's exposition, which is clear, leads to improved play. If it is the positions and exercises that attract attention, the theory is worth anybody's study. The trouble is that many 'piece contacts' prove double-edged, like Newton's Law of Motion which states that to every action there is an equal and opposite reaction: one man may defend another - good! - but at the same time the defended piece reduces mobility by taking a square away from (ie, blocking) the defending man's move options - bad! If in chess Newton's 'opposite' will apply, but rarely his

'equal', nonetheless, since some squares are more important than others the accumulation of 'elementary contact' observations will seldom lead to a better than tentative conclusion about a position.

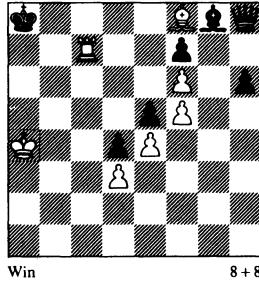

Erfolg im Endspiel, by J. Averbach, Sportverlag Berlin, 1987. This is an 'abbreviated Averbakh', in other words a German language single volume of 208 pages, which exercises. Don't worry, solutions are there too!

"How to Solve Problems and Studies", by Ya. Vladimirov, 112 pages, 1986, in Russian. Chapters reflect the sequence of rounds in championship solving contests, with numerous examples taken from WCSC events. 15 pages on study solving come near the end. Three rules-of-thumb stemming from Anatoly Kuznetsov will be familiar to most solvers: unclear variations mean you're on the wrong track; if you think W wins/draws 'anyway', you're missing a defence; and *pretty* means you've solved it, *boring* means you haven't. One could add, 'when in doubt push a pawn'. And if really stuck, consider a quiet re-grouping or partial *undoing* of an earlier move.

What other solving hints do EG readers find effective?

No.7353: Anders Gillberg (Sweden). Judge: Alexander Hildebrand (Sweden). The award was modest for a formal tourney, and EG is serving its readers with the definitive version, that is, after eliminations during confirmation time. A reserve study (by Vandecasteele) was introduced to make up for the disappearance of the leading pair of studies (by Dobrescu, by Gillberg) and another by Gillberg. EG is not reproducing these, as there are greater excitements to report. Do readers approve? What should EG's selection policy be? Have we got it right? Do write to us and let us know your views. The eliminations during confirmation time emphasise the difference that severe testing makes. They also emphasise the rare quality of the award-making process when the task is undertaken conscientiously. Probably there should be a clear distinction between study composing tourneys where stringent testing (for soundness and anticipations) will be applied, and other tourneys. Quality control? *Seal of Approval*

tournaments?! Poor old FIDE Commission - yet another subject it's never tackled! Back to reality - the statistics of the entries: 40 studies by 27 composers from 13 countries. 1.Sf7+ (d7? Kc7;) Ka7 2.d7 Rc6+ 3.Sd6/i Re2+/ii 4.Kd5 Rxd6+/iii 5.Kxd6 d2 6.Ra8+/iv Kb7 7.Rb8+/v Ka6 8.Rb6+/vi Ka7 9.Rb1 Re1 10.Rd1/vii Rxd1 11.d8Q Ra1 12.Qc7+ wins.

- i) 3.Ke5? Re2+ 4.Kd5/viii d2 5.Rh1 Re1, draw.
- ii) Rxd6+ leads to the same play, but bRf2 is prevented from playing to the first rank after ...d2.
- iii) d2 5.Kxc6 e1Q 6.Ra8+ Kxa8 7.e8Q+ wins.
- iv) W strives to promote with check.
- v) But how can B1 draw after 7.Ra1!? For example, Re1 8.Rd1 Rxd1 9.d8Q, and whither should bR play? One senses the composer's intention that there is a thematic point here. Failing to find any I corresponded (via Alexander Hildebrand!) with Gillberg, who supplied this line: "Rc1 10.Qe7+ (Qd7+,Kb6;) Kb8 11.Qe8+ (Qd8+,Kb7; or Qf8+,Rc8) Kb7 12.Qb5+ Kc8 13.Qa6+ (Qd7+,Kb8;) Kb8 14.Qb6+ Kc8 drawn". But W should play 12.Qe4+ (in place of 12.Qb5+??) and if Kc8 13.Qa8 mate.

We can all overlook things, but how can such mass oversight over such a long period happen, when supposedly well motivated composer, judge, solvers and other com-

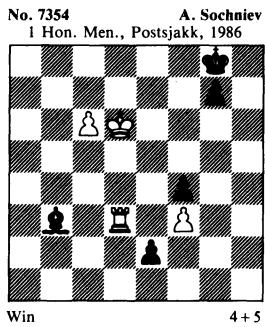

petitors even have confirmation time at their disposal? All too easily, it seems! Perhaps nobody tried to understand the study deeply - 'an abyss may defy detection if it is buried deep enough'!! [AJR has a schoolboy fondness for mixed metaphors and Irishisms - self-contradictions that nevertheless make sense. The classic Irishism is 'a hole at the closed end', taken from the description of a gun-breech, explaining how detonation is engineered.] If readers wonder why, in the light of our introductory remarks we reproduce this study at all, we have to say that the flaw is in the final award, EG endeavours to give final awards (faulty, if that's what they are) and at least we have before us a fine example of the administrative complexities of awards. It could have been another award, it just happens to be *Postsjakk*. It's like pollution - the Earth's level of pollution worsens as detection systems become more refined.

Rules for Conducting Formal International Tournaments

As regards formal international tournaments our strict comment is that if the chess world wants sound studies, then (a) composers must submit full analyses, and (b) insufficient analysis has to be a valid reason for a judge rejecting a study. We may allow that if the judge has time he may (through the director in order to preserve anonymity) ask

for analysis; additional or corrected analysis may validly follow, but no correction to the position (or only the most trivial alteration affecting at most a single man) is to be condoned after the final closing date for entries.

No. 7367 Z.R. Caputto
L'Italia Scacchistica, x.88

A black and white diagram of a chessboard. The board is mostly empty, with only a few pieces: a black pawn at e4, a black rook at h7, a white king at g8, and two white pawns at f7 and g7. The board is divided into light and dark squares by diagonal lines. In the bottom right corner, there is a small icon of a person's head with a thought bubble containing the number '3 + 4'. Below the board, the word 'Draw' is written.

Win 5 + 4

No.7384: Pierre-Antoine Cathignol (France). Judge: Guy Bacqué, the studies columnist of the revamped magazine. Past intentions to hold an informal tourney (some years ago AJR had suggested Jean-Claude Letzelter as a competent native composer-judge) collapsed, for reasons unspecified, though the award's preamble hints at differences between 'les chroniqueurs' and 'la rédaction'. Whatever the history, justice is now both done and seen to be done - a really noble effort by the new team. Original studies by 23 composers from 8 countries had appeared in the 10-year period. The judge sifted these 38 (this number of originals divided by the 10-year period produces a tourney record of sorts!), regretting in his award the overall low standard.

In front of my astonished eyes the future World Champion Mikhail Tal found key moves of the solution while looking over GM Yuri Averbakh's shoulder during the 1958 Portoroz Interzonal. The reason for reproducing this study here is that the position after Bl's move 2 was entered by Jean-François Baudoin (France) as an original and was indeed awarded third honourable mention, the judge commenting "A surprise underpromotion." There can never be absolute proof of plagiarism, but it is always possible to ask the suspect composer to supply full supporting analysis by return of post, warning him that failure to comply will be interpreted as admission of guilt.

No. 7396 V. Anufriev and

 1st Prize, Shakhmaty v SSSR, 1986
 award: ix.88

No.7396: V.Anufriev and B.Gusev.
 Judge: Karyn Sumbatyan (b.1959), who is a Muscovite APN journalist specialising in Arabic languages. When he is evaluating a contemporary study he looks first and foremost for the thought that is fresh. ... Yes, we all do that, it's the 'ouch!' that turns us on, of course. But let it not be forgotten that to produce an award that will withstand lasting close scrutiny, such subjective choice (the 'ouch!') should be tested against the objectivity of a comprehensive data base that allows an exhaustive search for anticipations. See EG 89.6557, Judge Zinar found out later that this is a study by the Italian composer A.Dall' Ava (Prize in Thèmes-64, 1961) (see Sh.vSSSR viii.86 and xi.87). Well, how much worse is

this than a player scoring a point by copying a game found in a book or magazine?! The judge prefaces his award as follows. "The editorial high-jump bar for studies is set way up and to qualify (for publication) is not easy even for the experienced composer. But the quite ruthless selection process and the presence of stringent quality control (OTK = Department of Technical Control) to pass the fine mesh of the solvers not only does not scare them off, but is all the greater spur to those who are confident of their new work's high class!

"But elsewhere we experience proliferating competitions, more or less devoid of immunity from elementary defects, organised all over the place by all who feel like it, with no point of comparison with this journal's tourney. One has seen judges' reports incorporating statements to the effect that, say, studies honoured in Shakhmaty v SSSR - in a class with the prize-winners of any other tourney, but awarded honourable mentions - were at the level of prizes in the local tourney. To my mind Shakhmaty v SSSR can do without such compliments. I suspect that one day the self-styled tourney organisers will come to their senses.

"Maybe it is high time to phrase the question point-blank: should we not, to put it bluntly, be putting a stop to amateurish tourneys? To sanction tourneys only to those chess periodicals (there is no shortage) where the column is run by an

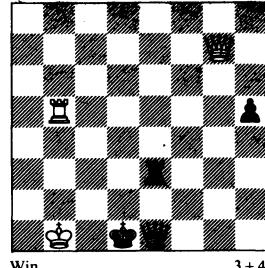

experienced master consistently checked by a group of zealous solvers? [So, is élitism to replace spreading the gospel? AJR] Otherwise there will be no end to the ceaseless devaluation of excellence. "Enough of this pessimism. All together now, as loud as you can, raise a cheer!" [Probably written with ironic intent. AJR]

[In fact the answer that both keeps the highest standards and allows democratic freedom is in principle simple. Two types of composing tourney: one 'seal-of-approval' with the strictest well-publicised defined standards, the other free-for-all with no-holds-barred and minimal controls.]

So much for the hard-hitting preamble. The judge now comments on the present study. "W will not escape without transferring wB somehow to contest the long diagonal (a1-h8), but neither 1.Bd6? Kd5+ nor 1.Bf4? Ke4+ is any good. Therefore: 1.Kg8. It is now Bl who has to make his mind up. Ke4. This recognises that Kd5 2.Bf4 Bb2 (Ke6;Bh6,Bh8:g7) 3.Bc1 Bc3 4.Bd2 Bd4 5.Be3 Be5 6.Bf4 Bf6 7.Bg5 Bb2 8.Bc1 is a job for life for wB on the c1-h6 diagonal. 2.Bd6 Kf5. recognising the echo draw on the a3-f8 diagonal after Bb2 3.Ba3 Bc3 4.Bb4 Bd4 5.Bc5 Be5 6.Bd6 Bf6 7.Be7 Bb2 8.Ba3. 3.Bf8 Bh8. Excellent! A hidden stalemate trap is thereby avoided: Kxg6 4.h8Q Bxh8 5.Bg7 Bxg7. 4.g7. W is also on the qui vive. 4.Kxh8? a1Q 5.g7 Kg6 6.Kg8

Qa2+ 7.Kh8 Qb2 8.Kg8 Qb3 9.Kh8 Qc3 10.Kg8 Qc4+ 11.Kh8 Qd4 12.Kg8 Qd5+ 13.Kh8 Qe5 14.Kg8 Qh5 15.h8S+ Kf6 16.Bb4(a3) Qd5+ 17.Kh7 Qe4(d3)+ and QxB. Long drawn-out, maybe, but crystal clear. a1Q. Anticipating a similar win after 5.ghQ? Qa2+ 6.Kg7 Qb2+ 7.Kg8 Qb3+ 8.Kg7 Qc3+ 9.Kg8 Qc4+ 10.Kg7 Qd4+ 11.Kg8 Qd5+ 12.Kg7 Qe5+ 13.Kg8 Qe6+ 14.Kg7 Qg6 mate. But W is on his guard. 5.ghS, and after Qa2+ 6.Sf7 (Kg7? Qe6;) Kg6, once again we have h8S+, and a draw. Just seven men in total, and seven moves. But what a show! A perpetual chase in two echo variations, two entertaining ladder ascents by bQ, and an effective flying leap by bB from corner to corner, then a brilliant little stalemate, and finally the micro-miracle of two under-promotions to bS. Amazing!" One might add that the starting position is natural enough to satisfy the most sceptical player who 'never looks at studies because they are artificial'.

Ke2+ 2.Kc2 Qg3 3.Rd2+ Kf1 4.Qf6+ Kg1, is a failure. **Re2.** Alternatives lose quickly: Qe2 2.Rd5+ Rd3 3.Qg1+, or Qg3 2.Qf1+ Kd2 3.Rd5+ Kc3 4.Qc1+. **2.Rd5+ Rd2.** We can see that bR is pinned both ways, on the file and on the rank. But how can W take advantage? 3.Rd6? is tempting, with the intent to pin bQ after Qe2 4.Qh1+ Qe1 5.Qf3+ Qe2 6.Qb3+ Ke1 7.Re6, but there follows Rd1+. If W chooses 3.Rd4?, expecting Qe2 4.Qc6 Qe3 5.Qa4+ Ke2 6.Re4, the stumbling-block is 3...h4 4.Qf3+ Qe2 5.Qc6 Ke1 6.Qh1+ Qf1 7.Qxf1+ Kxf1 7.Rxd2 Kg1, drawing. The riddle is solved only by: **3.Rd8 h4 4.Qg4+ Qe2 5.Qa4.** The difference lies in the open fourth rank! Ke1 6.Qxh4+ Kd1. Kf1 7.Qh1+ Kf2 8.Rf8+ Kg3 9.Qg1+ Qg2 10.Rg8+. 7.Qh1+ Qe1 8.Qf3+(g2) Qe2. And now that bhP has been eliminated, W can play: 9.Qc6 Qe3 10.Qa4+ Ke2 11.Re8 Rd1+ 12.Qxd1+ and 13.Rxe3, winning. Once again we have a miniature in mint condition, with the subtlest of counterplay and profound bilateral a-h and 1-8 geometry! This study is as close to perfection as the previous one. To expect more sacrificial content (though there is some) and less dryness from the present study, would be asking something absurd, like blaming the joint authors for lack of 'logic'. I frankly confess

that a comparison of these two high class productions was far from easy, and yet my opinion is that the first outweighs the second -- by no more than a gramme."

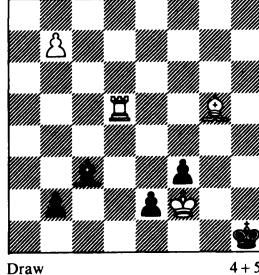

No. 7398 Em. Dobrescu

3rd Prize, Shakhmaty v SSSR, 1986

No.7398: Em.Dobrescu and V.Nestorescu (Bucharest). "The board shows a middle-game rather than an endgame. After 1.Re1+ Kf8 there is the ambush 2.Qf1, forcing Qf6+ 3.Kg4 Rf2, after which once more W's position is unenviable. He launches into a counterattack with a sacrifice. 4.Re8+ Kxe8 5.Qb5+ Kf8 6.Qxc5+ Kg8. One would say that as Bl has two extra pieces, a powerful attack and a readily defended bK, W is once more in trouble. All the same, 7.Qc8+ Qf8 8.Rb8, and we have a curious 'collision' wherein the Q-exchange fails: Qxc8 9.Rxc8+ and 10.Rxc1. On top of that wQ is threatening to leap aside with check, not to mention the capture on f8. Bl must play Kg7, but 9.Qc7+ Qf7 10.Rb7. The logical situation is repeated. And yet again after Kg6 11.Qc6+ Qf6 12.Rb6. bK retreats, but Nemesis

is in his wake: Kg7 13.Qc7+ Qf7 14.Rb7 Kg8 15.Qc8+ Qf8 16.Rb8. We are witnesses to a complex dynamic positional draw with a perpetual partnership of wQ and wR on ranks 8, 7 and 6. Once again a study of the greatest interest, with antecedents. First was Gurvich (1960) with a pair of 'doublings' (by wQ and wB), and then Dobrescu (1980) with three-fold doublings using the same positional draw mechanism, on diagonals. It is curious that the successful, integrated introduction arose out of solvers' demolition of the first published version."

award: 23.xi.88 and (booklet): 6.i.89

No.7458: David Gurgenidze (Georgian SSR). Judge: V.Neidze.

This 23rd multi-section tourney marked 30 years of the newspa-

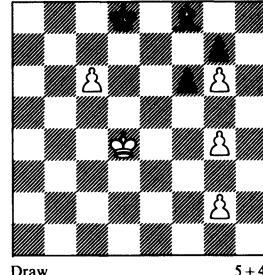

per's chess column run since inception by D.K.Kanonik. 46 study composers sent in 66 studies. The provisional awards were published in the newspaper column, and the final award (all genres) has been published in a 56-page booklet with a print run of 700. 1.d7 Sf6+ 2.Kf3 e1S+ 3.Ke3 Sxd7 4.Rc8+ Kg7 5.Rc7 Sg2+ 6.Kd3 Sf4+ 7.Kc3 Ra3+ 8.Kc2 Rd3 9.Rc4 Rf3 10.Rc7 Rd3 11.Rc4, drawn.

No. 7464: Vassily Smyslov (Moscow). From time to time another study by the ex-world Champion is 'discovered', so the publication of all his 'missing' studies is most welcome. They are in a 3-page article by the composer himself in issue No. 7/1989 of the *Bulletin of the Central Chess Club of the USSR*. The dates run from 1936 to 1987. We select a scintillating pair of

reverse-colour 'twins'. Before consulting the solutions the reader is invited to make a wild guess (from comparing the diagrams) as to why the defence is successful in the first while the attack wins through in the second. 1.c6/i c2/ii 2.Bd2 Bb2 3.d6 bc 4.Ke6 c1B/iii 5.d7+ Kc7 6.d8Q+ Kxd8 7.Kd6 c5 8.Kxc5 Kc7 9.Be1, and it's a draw. The exchange of wB can never be forced, because W does not need to retain wPa5: after its loss wK sits on a spartan throne on a2, and his wB vassal roams with diagonals to spare.

No. 7473: Harrie Grondijs (Rijswijk,
 Netherlands), corrected by SN colum-
 nist and tourney judge Jan van Reek.

The judging task was delegated to AJR for No. 7481. The tourney was dedicated to the memory of Sergei Ivanovich KAMINER, one of several Russian study composers who fell victims to Stalinist oppression and terror. "The 45 entries from composers in 11 countries were of a high standard, the top three standing out. The 'special' honours were awarded for corrections for four months, and EG presents the definitive verdict, after solvers, including a powerful Czech contingent, and the judge himself, had injected much analytical labour.

GBR: code (after Guy/Blandford/Roycroft) denotes chessboard force in at most six digits. Examples: two white knights and one black pawn codes into **0002.01**; wQ bQ wR codes as **4100**; wBB vs. bS codes as **0023**; the full complement of 32 chessmen codes as **4888.88**. The key to encoding is to compute the sum '1-for-W-and-3-for-B1' for each piece-type in QRBS sequence, with wP and bPP uncoded following the 'decimal point'; the key for decoding is to divide each QRBS digit by 3, when the *quotient* and *remainder* are in each of the 4 cases the numbers of B1 and W pieces respectively.

Next meeting of *The Chess Endgame Study Circle* (in London) on Friday 7th July, and Friday 6th October, 1989.
